

This document is addendum number 2 to the Grand Forks 2021 Transformer RFQ.

This addendum answers questions that have been posed by various vendors.

## Q and A:

Q1: Can the transformers be built to CSA C227.4-21 instead of C227.4-06 as specified?

A1: Yes the requirement is to build to C227.4-06 or later version.

Q2: please clarify the requirement for taps in the 7.2 kV winding?

A2: The spec for taps to be on the 12.47 / 7.2 kV winding are for instances of dual voltage transformer where it was necessary to specify which winding has the taps. In this RFQ all transformers are single primary voltage and so the taps must be in the 12.47/7.2 kV winding.

Q3: What is the hand wheel bushing, can you provide a photo?

A3: The hand wheel bushing is a bird/wildlife guard over the electrical connection of the high voltage bushing.
